XyWrite began in the early days of the IBM PC. The founders of XyWrite, Dave and John, had worked on larger computers, and wanted to bring those features to personal computers. What gives XyWrite uncompromised speed is the fact that the XyWrite team went to the extra work of writing XyWrite in assembly language (as opposed to a higher-level language). We feel it's the only way to go.

XyWrite has evolved, and the XyWrite team has grown along with its product. We are here to support you. We are constantly seeking ways to improve XyWrite, and we appreciate any comments you might have. Don't hesitate to contact us with your problems or with new ideas. We want XyWrite to work for you, to meet your needs.
